B.

A World of Choice

LUXURY LAMINATE FLOATING FLOORS

SOLIDO ELITE WR | DYNAMIC XXL | AUTHENTIC XXL

Our luxury laminate floating floor collection is inspired by nature, reflecting nature's atmosphere of rich structure, wildness, and unpredictability.

With three beautifully crafted ranges to choose from, made in Germany using the most modern of production methods in one of the world's largest laminate factories, our collection has options suitable for every floor space.

Whatever your style, or floor space we have choices; from light Scandinavian floors to natural tones and even sophisticated dark tones.

SOLIDO ELITE WR – Houston 52349
Plank size 192mm x 1285mm | Total thickness 8mm

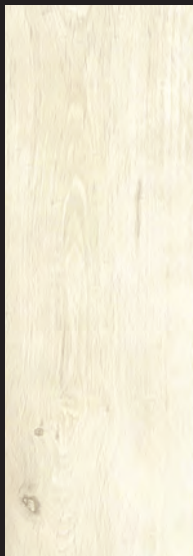

SOLIDO ELITE WR - Denver 52357

Plank size 192mm x 1285mm | Total thickness 8mm

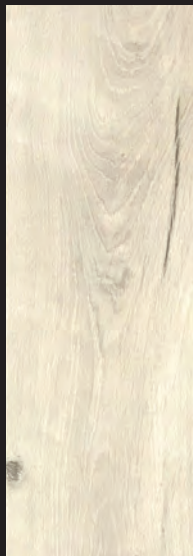

SOLIDO ELITE WR

Solido Elite WR brings a wooden laminate flooring to life with precise attention to detail. Constructed with a Megaloc Aqua Protect locking system, this provides water resistance with an effective barrier against water penetration. This range also has an LLT anti scratch technology and reinforced top layer providing extraordinary resistance to wear and micro scratches making it durable and long lasting.

SOLIDO ELITE WR LOCKING SYSTEM

megaloc
aqua protect

Solido Elite WR Megaloc Aqua Protect assembly system is based on the innovative Megaloc Aqua Protect

solution. It is an effective barrier against water penetration. It is a simple, convenient and tool-free assembly system.

1. 2-fold edge hydrophobisation

4. Durable force locking connection

2. Bevelled lacquer

5. Swelling-modified High Density Fibreboard (HDF)

3. Overlapping bevel

One of the most important features that differentiates Solido Elite WR from other products is the Isowaxx® coating that all CLASSEN® laminate flooring incorporates. In hot and humid climates Isowaxx® is definitely something all homeowners should not be without. Isowaxx® is a sealant that prevents moisture from seeping into the joints of the flooring.

AUTHENTIC XXL AND DYNAMIC XXL LOCKING SYSTEM

megaloc

Patented quick laying technology. Simply position, click into place and you're done. You have never laid a laminate

floor faster or more easily than with the CLASSEN megaloc quick laying system. Easily lay a large floor area within a short space of time. It is the locking system between planks that gives the laminate flooring a smooth and seamless surface that stays in place for years.

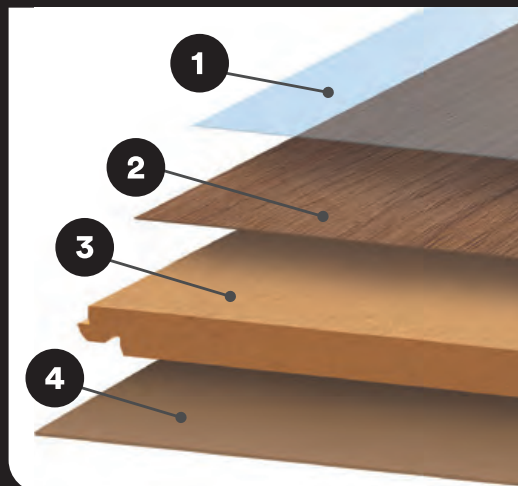

convex groove

Planks are installed in the V Groove shape. The shape of V-Groove flooring gives it a more natural look. The convex

shape and rounded edges make it seem like it is cut from hardwood instead of by a machine.

1. Protective layer providing exceptional resistance to high impact, scratches, and heavy load bearing.
2. Decorative layer. Décor paper with a true-to-nature look and feel using high quality ink.
3. High Density Fibreboard (HDF) superior mechanical properties create extra dimensional stability and moisture resistance.
4. Underlay for stability and as a moisture barrier.

ENVIRONMENTAL CREDENTIALS

Our laminate products are manufactured under a quality and environmental system certified as complying with ISO 14001. These ranges also receive the Blue Angel Certificate an ecolabel, which recognises products that are environmentally friendly and the entire life cycle of the product is taken into account and any impacts on the environment and health are fully considered during development.

The ISO 14001 is an internationally recognised standard that sets out the criteria for an environmental management system.

It provides a guideline for hard flooring manufacturers on how to enhance their environment performance and manage their environmental responsibilities in a systematic manner that contributes to the environmental pillar of sustainability.

All of our laminate products also receive the criteria required for air quality, slip resistance, reaction to fire and acoustic performance. These are available to view or download from our website.

CLEANING AND MAINTENANCE

REGULAR CLEANING

- Dry sweep or vacuum the floor weekly or more often, depending on the amount of dirt and foot traffic. The floor may be damp mopped if required. Use a clean mop, warm water and a neutral pH detergent; Wring out the mop as dry as possible.
- Always remove excess water. It can cause slip and fall hazards.
- Do not use soap-based detergents, caustic cleaners or abrasive cleaners.
- The use of a steam mop will void all warranties.
- Vacuum cleaning and sweeping are helpful for removing dust and dirt prior to mopping, cleaning up accidents and for places where the mop can't reach. Avoid using waxes and polishes which leave residues attracting more dirt.
- Mop up any spillages and treat stains immediately using an appropriate cleaning solution.
- Regular light maintenance is more cost effective than periodic heavy maintenance and more beneficial to the floor covering.

PREVENTIVE MEASURES AND TIPS ON CARE

- The use of wide-based plastic furniture protectors is also highly recommended to prevent scratching and indentation from furniture legs.
 - Never drag furniture or appliances across your floor. If using a trolley to move heavy object, do not forget to protect your floor.
 - Avoid hard plastic wheels of any type on your floor. Regular cleaning and the timely removal of abrasive dirt and stains greatly reduces the amount of cleaning required and prolongs the appearance and life of your laminate floor.
 - Never wet mop the floor or allow pools of water to sit for any length of time. Do not allow water to stand on the joints for long periods of time either. Do not steam clean or steam mop your floor.
 - Always sweep, mop, or dry vacuum the floor regularly.
 - Always use clean equipment – dirty equipment only redistributes the dirt.
 - Do not mix cleaning products from different manufacturers – they may not be compatible.
 - Always remove any spillage immediately.
 - Always remove excess water.
 - Always take precautions to prevent dark rubber from coming into contact with the floor.
 - Never deviate from the manufacturer's recommended dilution rates.
 - Wet floors are slippery; always use warning signs to advise that cleaning is in progress.
- Regular cleaning is more beneficial to the floor covering and more cost effective than occasional heavy cleaning.

SPOT PROTECTION AND REMOVAL

- Chemicals of all kinds such as solvents, medicinal drugs and disinfection agents, hair dye, tea, fats, pencil or marker ink etc, can permanently stain the floorings.
- Direct contact of the floorings with material made of dyed rubber, such as dirt absorbing mats or rubber caps on devices, chair or table legs, can permanently stain the floorings. Contact points should therefore be protected. This should also be done with products made of terracotta.
- Direct sunlight as well as intensive artificial light may cause discolouration of all floorings. Protect your floor by using window tinting, curtains, blinds, and/or awnings.
- Most domestic agents will not harm the floor, however all residue of cleaning agents should be removed to avoid discolouration.

SUBSTANCES THAT CAUSE DISCOLOURATION	ACTION TO TAKE
Asphalt	<ol style="list-style-type: none"> 1. Wipe immediately with a paper towel or cloth 2. The area should then be washed using a damp cloth or sponge
Coco-Fibre Mats	
Crayons	
Lipstick	
Nail Polish	
Paints containing Acetone	
Permanent Marker Pens	
Rubber Mats	
Shoe Polish	
Solvent-based Paints	
Spices	
Tar	
Varnish
