# Cleaning Guide

---

## STEP ONE – SOIL CONTAINMENT

---

Soiling occurs when dirt is tracked into the house from outside, and is embedded into your carpet. The use of walk-off mats, both inside and outside, will minimise the soiling in your carpet.

- Outside mats – use soil-removal mats that have a coarse texture, are designed to brush soil from shoes.
- Inside mats – use mats to prevent moisture dirt and soil from reaching the carpet.

Mats must be vacuumed and cleaned frequently so that they do not then become a source of soiling.

---

## STEP TWO – FREQUENT VACUUMING

---

Regular vacuuming with a good quality vacuum cleaner is essential to preserving the life of your carpet to prevent premature replacement. Dirt and soil can grind at the carpet fibres and cause permanent damage, causing your carpet to flatten and wear before it's time.

After your carpet is installed, vacuum carefully and frequently in the first week to remove surface dust and yarn remaining. For ongoing vacuuming, we recommend vacuuming at least twice a week, especially in high traffic areas. Pay specific attention to narrow traffic ways which will always show the first signs of wear.

Make sure that your vacuum cleaner is in good working order; remember to change dust bags and clean filters regularly. Vacuum cleaners should have high suction and NO beater brush, as this could affect the look and performance of your carpet.

Consideration should also be given to the use of vacuum cleaners with High Efficiency Particulate Air (HEPA) Filters. These filters are capable of filtering particles down to 0.2 micron, which includes bacteria and spores but not viruses. They prevent the recirculation of dangerous and unwanted particles and thus have a positive impact on Indoor Air Quality (IAQ) unlike vacuum cleaners with standard filters.

---

## STEP THREE – SPOT AND STAIN REMOVAL

---

Spots and stains are inevitable, but they don't have to be permanent. The key to dealing with spots and stains is to deal with them immediately. Most everyday spills simply require a light clean with water, and preferably the use of a wet/dry vacuum. E.g. Bissell Spot Clean. For stronger stains, please refer to our stain chart for advice.

### Staining vs Soiling

The majority of 'stains' that appear on your carpet are actually related to soiling. Many sugar based products that are cleaned off your carpet can leave a sugar residue after removal if not rinsed thoroughly. Or, when spills are cleaned with a detergent solution and the area is not rinsed thoroughly, a similar residue can remain. This sticky residue can readily attract soil from ordinary foot traffic and the results of this appear to be a stain. It is important to rinse your carpet thoroughly after cleaning, and make sure to blot dry as much as possible.

Do contain the stain as much as possible. Scoop up solids immediately, and then blot/dab as much of the spill as possible from the carpet with a clean white cloth. Work from the outside of the stain or spill towards the centre to avoid it spreading. **DON'T** ever scrub or rub the carpet! This will damage the pile and may worsen the stain. Also don't over wet the carpet with water or any other liquid.

STAIN	METHOD	STAIN	METHOD
Blood	1, 2, 7	Nail Polish	4, 7
Chewing Gum	3, 2, 7	Paint (latex)	1, 2, 7
Coffee / Tea	2, 6, 2, 7	Urine (fresh)	1, 2, 7
Marker Pen / Ink	5, 2, 6, 7	Wine	2, 6, 2, 7

## METHODS

1. Rinse with cold water.
2. Mix 1 teaspoon of mild laundry powder with 1 litre of warm water. Apply carefully to the area and then blot to remove residue.
3. Chill with either ice cubes in a bag or with an aerosol freezing agent. Once frozen, remove gum by picking or scraping it off.
4. Clear pure acetone (available from a pharmacy). Apply sparingly to the area and blot to remove residue.
5. Mix 1 tablespoon of clear household bleach (ammonia free) with 1 cup of water. Apply the solution to the area and blot to remove residue.
6. Mix 1 part white vinegar with 1 part water. Apply the solution to the area and blot to remove residue.
7. Rinse thoroughly with warm (not hot) water. Ensure there is no sticky residue remaining.

## STEP FOUR – PERIODIC PROFESSIONAL CLEANING

Steps 1-3 are great for day to day care, but giving your floor a deep clean periodically will extend the life of your carpet so that you can enjoy it for longer. When your carpet appears dirty even after vacuuming, it's time for a professional clean. We recommend hot water extraction every year. This is the most effective and frequently used method of deep cleaning in the industry, and will give the best restorative deep cleaning results.

It is important to use a reputable steam cleaning company who operate in accordance with the Australian and New Zealand carpet cleaning and maintenance standard AS/NZS 3733:1995. Shampooing, do it yourself steam cleaning, or dry cleaning are not recommended.
